

Operator10[®]

Wastewater Information Solutions

Run your plant with confidence and peace of mind!

The Operator10 Advantage

Engineered to reduce operating costs and simplify the daunting task of managing facility-wide data, Operator10 provides the information you need—all in one database.

- **Accessibility, security, stability**
- **Reduced errors and duplication**
- **Flexibility in sorting and calculating**
- **Standardized, centralized data repository**
- **Own/control your own data**

Measurable Savings in Time and Costs!

- **Make faster, knowledge-based decisions**
- **Collect data from multiple sources**
- **Ensure industry and regulatory compliance**

Operator10 enables you to customize your facility information and provides a current and historic picture of the operation of your plant through centralized storage of data.

What really sets us apart from any other software is our affordability, personal attention, and unparalleled service after the sale.

Expect more.

Our Customers Say It Best...

"We use Operator10 to create and print out a vast amount of reports on plant processes, including state required monthly operational reports. The program allows us to look at a multitude of parameters to check on water quality, historical and short-term trends of chemical usage or water quality parameters."

*~ Frank Blaskovich, Jr., Plant Manager,
Wheeling Water Treatment Plant, WV*

"Operator10 is most useful for trending and analyses, and allows us to do DMR reports in minutes instead of hours. We can provide answers to EPA auditors immediately when we would otherwise have a month to respond."

*~ Chris Melvin, Pretreatment Coordinator
City of Piqua WWTP, OH*

AIMax
Software

Maximum Flexibility and Functionality!

- **Optimal Plant Efficiencies**

An extensive process section automatically calculates process control values, such as loadings, removals, detention times, filter rate, backwash rate and chemical usage. Custom calculations are effortless with over 150 custom functions that are engineered into the Operator10 program.

A built-in import function enables you to collect sampling and test data from LIMS (Laboratory Information Management System), reducing the risk of duplicate entry and critical errors.

- **Concise View of Select Data**

Operator10 utilizes DataViews as a method for tabulating and presenting information. A DataView quickly gives you an overview of data in a visual form of reference that can be customized to individual preferences.

- **Standard and Custom Reports**

With an extensive selection of stock and state reports built into the software, and an integrated design tool for customizing your reports, Operator10 provides the power, tools and flexibility to produce the documentation you need.

- **Customize Your Dashboard**

Organize information from multiple components into a unified display that is easy to read and understand. Create a variety of views and hotspot links for instant access to desired data.

Add-On Options

Audit Trail

Automatically records changes to data for historical reference.

OPC/DDE Interface

Link Operator10 to any SCADA or other compatible application.

Let our technical support team help you explore how Operator10 can solve your most challenging information management issues.
